Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Travis et al. (US Patent 6,611,045).
2. As for claims 1 and 9, Travis discloses the invention as claimed, including a method of manufacturing a semiconductor device having first and second regions using first and second different power supply voltages wherein first and second design rules are applied to the first and second regions in accordance with first and second power supply voltages [abstract; col. 2, lines 45-56].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the

Art Unit: 2812

subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 7-8, and 15-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Travis (US Patent 6,611,045) in view of Chen (US Patent 6,399,486).

4. As for claims 7-8, and 15-16, Travis discloses the invention substantially as claimed, including the method of manufacturing a semiconductor device as cited in the rejection of claims 1 and 9.

Travis does not specifically disclose a dual-damascene process to form metal wirings (copper) in said regions.

Chen discloses dual-damascene process to form metal wirings (copper) in said regions [col. 5, lines 30-50].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Travis and Chen because Travis and Chen are concerned with the design of semiconductor circuits with wiring which would benefit from Chen's dual-damascene process (copper wirings) overcoming defects in the via and trench regions through the use of Chen's process, which would improve circuit design.

5. Claims 2-6, and 10-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: As for claims 2-6, and 10-14, the prior art of record fails to disclose the wiring intervals, distances between vias, wiring grooves and vias according the first and second design rules of the first and second regions ac claimed.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stacy A Whitmore whose telephone number is (571) 272-1685. The examiner can normally be reached on Monday-Thursday, alternate Friday 6:30am - 4:00 pm.
